Lonicera japonica Flower Powder

Final Authorized Version 1.0

Lonicera japonica Flower Powder

DEFINITION

The article consists of the dried flower buds or dried flowers in the early opening stage of *Lonicera japonica* Thunb. (Family Caprifoliaceae), collected before full flowering, reduced to a fine or very fine powder. It contains NLT 3.8% of caffeoylquinic acids, calculated as the sum of [chlorogenic acid](#) [1], 3,5-di-*O*-caffeoylquinic acid, and 4,5-di-*O*-caffeoylquinic acid on the dried basis; and NLT 0.80% of iridoids, calculated as the sum of sweroside, secoxyloganin, and centauroside on the dried basis.
